

ABBABA TOURE

Software Engineering Co-op Student | Platform/DevOps, Automation & Full-Stack Development

Ottawa, ON, K1W 0A9, Canada

+1 (613) 879-7613 atour095@uottawa.ca [linkedin.com/in/abbaba-toure](https://www.linkedin.com/in/abbaba-toure) github.com/abbabat abbabat.github.io/portfolio

Education

University Of Ottawa

Expected Graduation date: December 2027

Bachelor of Applied Science, Software Engineering (CO-OP)

Ottawa, ON

- Relevant courses: Data Structures and Algorithms, Computer Architecture, Digital Systems, Operating Systems, Software Quality Assurance, Analysis and Design of User Interfaces, Databases, Software Construction
- Member of Dean's Honour List

Experience

Software Developer Intern

May 2026 – Aug 2026

JSI Telecom

Ottawa, ON

- Shipped an automated CI/CD deployment-validation gate (GitHub Actions) that end-to-end deploys and integration-tests every pull request against a live Ceph cluster, delivering 8 tickets across 7 releases with zero broken-infra merges.
- Restored 100% deploy reliability by root-causing a memory-exhaustion crash in the Ansible bootstrap phase, and closed a security defect that was leaking an RSA private key and password hash into CI logs.
- Unblocked local development by fixing the Ceph deployment pipeline to run first-try in a Dev Container, building a multi-stage Docker image and single-command wrapper for the full IaC toolchain (OpenTofu, Terragrunt, Ansible, Molecule).
- Reduced the platform's attack surface by replacing root SSH access with a least-privilege, key-only Ansible service account across 4 repositories, and adding FIPS-compliant SHA-512 credential hashing across 5 environments.

Automation Tester Intern

Jan 2025 – May 2025 & Sep 2025 – Dec 2025

Global Affairs Canada

Ottawa, ON

- Developed and executed Nightwatch.js end-to-end and regression suites for NEICS Web across DEV/QA, and authored XUnit/C# unit tests with NSubstitute mocks for API/database testing on ASP.NET Core services.
- Managed test cases, CI/CD pipelines, bug tracking, and pull requests through Azure DevOps.
- Led the full migration of the Nightwatch.js automation suite to Playwright, including helpers, commands, and test flows, then delivered a team demo that secured approval to migrate the entire repository.
- Enhanced automation reliability by adding data-test-ids, improving HTML/CSS structure, and refining page-object patterns.

Junior Developer Intern

May 2024 – Aug 2024

University of Ottawa

Ottawa, ON

- Maintained and cleaned the Workday ERP database—filtered legacy records and classified new data to boost accuracy.
- Built interactive dashboards from help-desk datasets, visualizing key support metrics to drive process improvements.
- Migrated and managed support tickets (TopDesk to JIRA), categorizing and prioritizing to streamline resolution workflows.
- Enhanced intranet UX by developing and reorganizing pages in Google Sites and Confluence.
- Conducted ERP system tests via proxy-based role simulations and authored launch documentation in SharePoint.

Projects

Class & Team Projects

Dec 2024 – Sep 2024

- **Organization App (Android, Java, Firebase)** Built an event-management app with role-based access (Organizer/Admin/Attendee), CRUD features, and real-time database updates.
- **Client-Server Chat (Java)** Developed a multi-threaded chat system with admin controls (start/stop server, kick users), broadcast messaging, and stable performance under concurrent clients.

Personal Portfolio | React, JavaScript, HTML, CSS

Dec 2023

- Built and deployed 4 React/JS apps (Guessing Game, Shoe Store, Data Dashboard, Cleaning Company Site) showcasing dynamic UI, API integration, and responsive layouts.
- Deployed using GitHub Pages and Netlify with full mobile responsiveness.

Technical Skills

Languages: Python, Java, C#, JavaScript, Bash, Assembly, XML, HCL

Front-End: React.js, HTML/CSS, WordPress

Testing: XUnit, MSTest, NUnit, Molecule, Nightwatch.js, Playwright

Tools & Platforms: Git, Azure DevOps, GitHub Actions, OpenTofu/Terraform, Terragrunt, Ansible, Docker, Kubernetes, Ceph, vSphere, Visual Studio, IntelliJ, Android Studio, ASP.NET Core, Jira, Confluence, Trello, MkDocs

Methodologies: Agile, Unit Testing, API Testing, Database Testing, Infrastructure-as-Code, TLS/PKI

Other: Microsoft 365 (Word, Excel, PowerPoint, Outlook, Teams, SharePoint), PowerApps
